

2.2.1: The institution assesses the learning levels of the students and organizes special programs for advanced learners and slow learners.

Bridge classes are conducted for first-year students immediately after they join to enable a flexible transition from school-level study to college-level study. After the commencement of first-year classes, a diagnostic test is conducted to analyse the statistics of the students. The diagnostic test focuses on:

1. The number of students who's medium of instruction in school was Telugu.
2. The number of students who had no prior exposure to computing knowledge.
3. The number of students from a rural background.
4. Based on these statistics, bridge classes are conducted in the following areas:
 - **Communicative English**
 - **Fundamentals of Computing**
 - **Mathematics** (conducted from a pharmacy point of view)

Remedial classes are handled by the respective subject faculty after regular class hours. During these sessions, faculty members interact with students to clarify doubts. After the first internal assessment, teachers guide students by addressing student-specific Gray areas. Students who score below the class average in the first internal mid-examination are identified as slow learners. Special coaching classes are then conducted for these students based on their test performance, after college hours. If a student's performance in the first internal assessment test is less than the class average, they are advised to register for remedial classes.

The mentor counsels the students, motivating them to participate in the remedial classes. These remedial classes are held in the evening between 4:00 PM and 5:00 PM. If the students' performance improves in the subsequent internal tests after attending the remedial sessions, they are appreciated and motivated to maintain their performance.
